Key Risks of Offshore Product:

This section is a summary of the key risks of the Offshore Product which is extracted from the Offshore Product Offering Document for Customer's reference only, and it is not an exhaustive elaboration. Customer is suggested to read all documents listed in below section "Offshore Product Offering Document" for detailed risk disclosure. In addition, Customer should read the Term Sheet, the Risk Disclosure Statement and other sales documents of the QDII Product, to understand the risk factors of the QDII Product.

Investment Risk

- The underlying investments of the Fund may fall in value and therefore your investment in the Fund may suffer losses. You may not get back the full amount of money you invest. In addition, the Fund primarily invests in equities or equity-related securities. Generally, equities or equity-related securities are subject to higher volatility and therefore higher risk of loss, compared to other instruments such as bonds, money markets instruments or bank deposits.

Concentration Risk

- The Fund invests in a concentrated portfolio of holdings compared to a typical fund with a similar investment mandate and therefore may be more volatile than more broadly diversified funds.

Derivatives Usage Risk

- The Fund may use derivatives for the purposes of hedging and/or efficient portfolio management. In adverse situations, the Fund's use of derivatives may become ineffective in hedging and/or in efficient portfolio management and the Fund may suffer significant losses.

Risk of Distribution Out of Capital for Inc-2 Share Class

- The Management Fee, the Management Company Fee, the Administration Servicing Fee, the Distribution Fee (if any), the Custodian's fee and all other expenses attributable to the Share Class will be charged against the capital account of that Share Class. This has the effect of increasing the Share Class's distributions (which may be taxable) whilst reducing its capital to an equivalent extent and therefore the Share Class may effectively pay dividend out of capital. This could constrain future capital and income growth. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends effectively out of the Share Class's capital may result in an immediate reduction of the net asset value per Share.

Exchange Rate Fluctuation Risk

- Currency fluctuations may adversely affect the value of a Sub-Fund's investments and the income thereon. Currency fluctuations may also adversely affect the profitability of an underlying company in which a Sub-Fund invests.
